SUMMARY

4 years of experience in Automotive Infotainment and Telematics testing, with expertise in both manual and automation testing. Competent in performing manual and automated testing, diagnosing and validating ECUs, creating test cases and test procedures, and analyzing test results. Skilled in hardware and software testing, as well as standard communication protocols. Experienced in collaborating with cross-functional teams to ensure system reliability and quality.

SKILLS

Core skills	: CAN, LIN, UDS Protocols.
Soft Skills	: Analytical Reasoning, Agile Mindset, Team Player.
Tools	: Vector Canoe (Rest Bus Simulation), Vehicle Spy, PuTTY, JIRA, Jenkins, JFrog, WinSCP, ADB (Android Debug Bridge), Renesas, QFIL, DLT Viewer, RIDE, Pycharm.
Test Automation	: Robot Framework, Python, CAPL
Platforms	: Android, QNX.
Domains	: Automotive Infotainment, Cluster and telematics Systems.

EXPERIENCE

TCS (General Motors) - Virtual Cockpit Unit Testing

Assistant System Engineer

(Oct 2022 – Nov 2023)

- Execute comprehensive testing and debugging activities to verify functionality, performance, and reliability of **infotainment** ECUs.
- Performed **Manual Testing** on **automotive communication protocols** such as **CAN and LIN** to ensure reliable data transmission and reception from various ECUs.
- Hands-on Experience in **regression, sanity, and smoke tests** on system updates to ensure that existing functionality remains unaffected.
- Conduct **signal-integrity validation** to ensure robust data transmission and reception across ECUs.
- Manage **test requirements and maintain clear traceability** from requirements to test cases and defects.
- **Collaborated with development and QA teams** to identify test cases and requirements for automation coverage and participated in issue reviews and supported continuous improvement of software quality and test processes.
- **Written brief testcases** to meet the system requirements for functional and non-functional testing.
- Expertise in **analyzing system logs and traces** for issues.

System Engineer

(Nov 2023 – Sep 2025)

- Define and execute communication protocol test procedures using Vector **Canoe(RBS)** to validate protocol compliance, message integrity, timing and error-handling mechanisms.
- Specialized in standalone testing for **Instrument panel cluster and Infotainment system** features which include Android Auto, CarPlay, **Navigation, Bluetooth, USB - update, Diagnostic**.
- **Provide comprehensive test reports** that emphasise system behavior, test findings, and any abnormalities discovered.
- Develop and maintain **Robot Framework automation** suits repetitive regression tasks and stayed current with **industry trends and best practices** in test automation.
- **Experience in JIRA** application for creating testcases, raising and tracking issues based on requirements.

- Provide immediate attention to business-critical issues which include **finding root cause, tracking issues**, and collaboratively working with developers for the immediate resolution.
- Demonstrated strong analytical reasoning skills by evaluating complex data sets to identify trends, solve problems, and support strategic decision-making. Adept at identifying challenges and implementing effective, practical solutions to drive continuous improvement.

Capgemini – Infotainment Testing

Senior software Engineer (Mercedes-Benz)

(Sep 2025 – Jan 2026)

- Tested infotainment features and functionalities to ensure compliance with requirements and expected behavior.
- **Identified, reported, and tracked** defects throughout the testing lifecycle, ensuring timely resolution and retesting.
- Developed and executed test cases based on system and feature requirements.
- **Reviewed requirements** and translated them into comprehensive **test scenarios and test cases**.
- Maintained and **updated test documentation**, including test cases, test results, defect reports, and test execution records.
- Performed **regression testing** to verify fixes and ensure existing functionality was not impacted.

POC Camera Application Testing – Volkswagen Group (Audi)

(Jan 2026 – May 2026)

- Performed **manual Proof of Concept (POC) testing** of an automotive camera application for a **Volkswagen Group (Audi) OEM program**.
- Validated camera application features such as **zoom control, image quality tuning, speedometer overlay visualization, and object detection functionality**.
- Tested **object detection scenarios for logos, human occupants, and animals**, ensuring correct detection behaviour and stability.
- Designed and executed manual test cases based on POC requirements and documented test results.
- Documented defects with clear reproduction steps and supported development teams during issue resolution.
- Collaborated closely with development, system, and validation teams to resolve issues and improve overall system reliability.
- Contributed to successful **POC demonstrations and early-stage feature validation**.

LTTS (Marelli) – Telematics

Senior Engineer

(Jun 2026 – Present)

- Building the **automation framework from the ground up** for telematics testing, structured across application, execution, verification, services, and hardware layers.
- Converting the manual test case backlog into automated coverage using **Robot Framework, Python, and CAPL**.
- Designed **positive and negative verification logic and DLT-based log verification** to reliably decide pass/fail results from decoded log data.
- Built reusable **CANalyzer, measurement, and MobaXterm control services** to connect automated tests directly to the bus and test bench.
- Delivered **dashboards and reporting** that turn raw execution logs into traceable results for program stakeholders.

EDUCATION

B.E. (Electronics and Communication Engineering).

2018-2022

Karpagam College of Engineering

CGPA 7.94
